

## Details

- Name: Imerge Pro
- MSRP: \$199
- Release date: 25th March 2021
- Version: 2021
- License: Single user, 2 activations on Mac or PC. Users will receive free updates when they are released (up to 12 months after purchase).

## Description

### Tagline copy

Make professional composites with the world's first non-destructive RAW image compositor for Mac & PC.

### Short copy

Imerge Pro is the first software of its kind to edit and composite RAW images without compression or loss of quality. Featuring a streamlined user interface, Imerge offers smart tools and effects to help photographers create high-quality compositions lightning-fast. Includes over 63 powerful filters, world-class keying technology, and 16-bit color processing.

## Features

### Built-in keying

**Playing with fire.** Remove fire and explosions from black or white backgrounds with the intelligently designed Remove Stock Background effect. See results instantly as Remove Stock Background selects the pixels that need to be transparent with ease.

**Look, no hands!** Automatic Chroma Key throws out the rotobrush and does all the hard work for you. Never slave over erasing fine hairs or lace detail again.

**When two become one.** Light wrap takes elements from your backdrop and curves them around the foreground to create one seamless image.

**No use crying over spilled green screen.** Don't be afraid of the dreaded green shadow again with automatic Spill Suppression that neutralizes the shade and removes unwanted spill.

**Nobody likes a hard edge.** Soften the edges of your matte to help bring your composition to life. With the help of the light wrapping and spill suppression. Nobody will ever know it's a composite image.

## Save and re-apply

If you love the look, why not take the effects and apply it to the next image? Imerge Pro's effects presets make everything super easy so that with just a click, users can save a whole look (multiple effects and all) and apply it again, and again.

## Flexible Layers

**Live with your regrets.** Flexible layers are a unique approach to image editing that let you change your mind whenever you like and however many times you want. Your layers are live and fully adaptable. Breathe easy knowing that your change of heart or sudden stroke of genius doesn't mean starting over or repeatedly clicking 'undo'. Simply go into the layer you want to edit and make your changes there.

**Objects of your affection.** With the 'Insert Objects' menu, you simply need to tap 'Ctrl' & 'I' and you can search for contents, effects, and masks, all inside a layer.

## 73 Powerful Filters Included

**Lighting adjustments** based on the shapes and lighting in your image layers with procedural shadow generation, volumetric light rays, and automatic light-wrapping. Imerge also offers fully-customizable glows

**Realistic optical effects** like fully-customizable chromatic aberration and authentic bokeh from Imerge's optical-emulated Lens Blur algorithm.

**Surgical color control** with 22 precision-adjustable color and contrast effects that work completely non-destructively on your 16-bit and 12-bit RAW layers. Black/white, grey-tone and skin-tone preservation can be effortlessly toggled and tweaked for the best results.

**Get more out of your gear** with post-production tools that can push your images further. Push your ISO and denoise it in post with Imerge's powerful Denoise tool, expand your

depth-of-field with focus-stacking, and cover every last detail from shadows to highlights with Imerge's HDR merge and editing tools.

**Retouching made easy.** Imerge's retouching tools are the key to a fluid workflow. Skin Retouch has everything you need in one place to get flawless skin tones, and highpass sharpening can be applied and customized in just a few clicks.

**Feel the heat** Imerge's powerful heat distortion and fractal distortion effects let visual effects look right at home in your composites. No-one will ever tell the difference.

**LUTs of options.** Save time in post-production, unify your images and do the heavy lifting with custom LUTs.

**With Matte Cleaner,** refine and adjust the results of your keying effects to improve the edges of the key and better isolate your subjects.

## Batch Processing

**Variety is the spice of life.** Why stop at only two or three variations of your image assets when you can mix and match until your heart (or client) is content? Imerge Pro does the leg work for you by creating multiple versions of the foregrounds and backgrounds you give it.

**Import RAW format images on the job!** Imerge will detect the camera and lens used and perform an automatic lens correction. You can then export to a number of different formats so your content is client-ready or Instagram-ready from the get-go.

**RAW Re-mastered:** We've unleashed Imerge Pro's new and improved RAW engine! It's custom-built allowing for a massive boost to RAW decoding and processing, so if you thought Imerge was fast before, prepare to have your socks blown off.

## Minimum system requirements

Imerge Pro is multi-core and GPU accelerated.

- **Windows:** Microsoft Windows 10 (64-bit), Microsoft Windows 8.1 (64-bit)
- **macOS:** macOS 10.15 Catalina, macOS 10.14 Mojave, or 10.13 High Sierra
- **Internet connection:** Required for online activation

- **Processor:** Intel Core i3, Core i5, Core i7, or AMD equivalent
- **RAM:** 4GB (8 GB Recommended)
- **Graphics card:**
  - 2048MB graphics memory for projects up to 24MP. 4GB+ for projects over 24MP
  - **Windows:**
    - Intel HD Graphics 4000 (GT2) (2012)
    - NVIDIA GeForce 600 Series (2012)
    - AMD R7 Series (2013)
  - **macOS:**
    - Dedicated cards from 2012 onwards
  - OpenGL 4.1 and OpenCL 1.2 support
